SHTECH Trading Services

PROJECTS

STUDY PORTAL | PYTHON - DJANGO

- This is a whole of college students projects , This project are divided
  in four parts. asper my side i am working in Ledger Maintenance
  projects.
- This projects is basically making a records of students, like class
  course, fees, payment. This is based on Django (Template based).

JOB-PORTAL | PYTHON - DJANGO

- Built an employment portal using Django, REST API, and JWT
  authentication with a successful implementation rate of 100%.
- JWT can be used to create secure user authentication and
  authorization, providing applicants with safe login and access
  control, resulting in 0% reduction in unauthorized access attempts.
  Establish an admin panel to manage user and application
  management for the employment portal.
- Ensured effective data storage and retrieval by managing the
  database schema using Django's ORM.

E-COMMERCE | PYTHON - DJANGO

- Developed a robust and efficient Django-based e-commerce
  website.
- Integrated features such as add to cart, order tracking, blog
  management, order history, and 100% secure payment methods.
- Implemented user registration, login, and authentication for
  personalized user experiences and secure account access.
- Managed a team to ensure timely project completion and
  conducted 10 code reviews to maintain code quality.
- Users can check their shopping cart, provide their shipping and
  billing information, and choose their preferred method of payment
  with 100% security.
- Users can modify the quantity of items in the cart, update prices
  based on any applied discounts, and remove items as needed.
- I have achieve 100% result in my e-commerce website.
